NOTE:

Asian pear trees tend to overbear. Thin fruit to one pear per cluster to have large fruit.

The latest blooming Asian pears will cross-pollinate with early blooming European pears.

Most Asian pears are self-fertile.

You will have a better crop of fruit if more than one tree of another variety is used.

DIRECTIONS for USE:

- 1. Select a cultivar you are interested in growing from the left hand column.
- 2. Check across the chart; the unmarked boxes will be a reliable pollinizer for the cultivar you have chosen.
