

## VINES

Vines are some of the most versatile plants available. Unlike shrubs and trees, which grow in a manner that is predictable, vines can be guided to grow in several applications.

You can train a vine to grow upward or outward, on a flat vertical surface, up and around a post or railing, over an arbor or fence and even use them as a groundcover in some cases.

There are very few evergreen vines available, most are deciduous.

Those marked in shade category will tolerate shade but they also like the sun.

Following is a list of available vines:

Name	Description	Growth	Sun	Shade	Hardy
<b>Actinidia (Kiwi vine)</b>					
arguta - male/female/self-fertile	small, smooth, edible fruit, disease and pest free	moderate	X		-25
deliciosa - male & female	edible fruit, red fuzzy leaves	moderate	X		0
kolomitka - male & female	edible fruit, variegated foliage	moderate	X		0
<b>Akebia</b>					
quinata (five leaved)	pink, white or purple flowers	moderate	X	X	0
'Purple Rose'	rose, pink	moderate	X	X	-30
'Shirobana'	white	moderate	X	X	-30
