

Asian Pear Pollination Chart

Variety Selected	Pollen Source																				
		Ari Rang	Chojuro	Hosui	Ichiban Nashi	Ishiiwase	Kikusui	Kosui/Old World	Nijisseiki/20th Century	Shinglo	Shinko	Shinseiki/New Century	Ubilean - European								
Ari Rang		X																			
Chojuro			X																		
Hosui				X																	
Ichiban Nashi					X																
Ishiiwase						X															
Kikusui							X														
Kosui/Old World								X													
Nijisseiki/20th Century									X												
Shinglo										X											
Shinko											X										
Shinseiki/New Century												X									
Ubilean - European													X								

NOTE:
 Asian pear trees tend to overbear. Thin the fruit to one pear per cluster to have large fruit. The latest blooming Asian pears will cross-pollinate with early blooming European pears. Most Asian pears are self-fertile. You will have a better crop of fruit if more than one tree of another variety is used.

- DIRECTIONS for USE:**
1. From the left-hand column select a cultivar you are interested in growing.
 2. Check across the chart; the unmarked boxes will be a reliable pollinizer for the cultivar you have chosen.
